

January 21 - 27, 2005

NASA Headquarters and Goddard decided to defer recycling the electrical power to the Solid State Recorder

(SSR) until another memory card loss. The FOT will continue refining procedures and contingencies.

The plan then is to complete this work with a command review (CAM) within the next couple of weeks.

When another failure does occur, the FOT will be ready to recycle the SSR (within approximately 2 weeks).

The tenth Terra re-engineering meeting was held on 1/25/05.

Preliminary closeout trade study discussions occurred with the following recommendations:

Incorporate ECLIPSE (via Gateway) and MMS on to the GMSEC Bus.

FDS and Analysis (ABE) components would not add great value on the GMSEC sub, so it is not warranted to add them at this time.
